

STEM MOBILE LABS

Dear Parents,

Your child has been taking part in a special program called **STEM Mobile Labs**, sponsored by The Wireless Foundation, and developed by curriculum specialists Young Minds Inspired (YMI). This initiative takes advantage of FREE cutting-edge smartphone apps that focus on STEM (Science, Technology, Engineering, and Mathematics) subjects. Designed to inspire teens to discover STEM studies through technology, the program also serves to encourage students to pursue rewarding and fulfilling STEM-focused careers in the years to come.

The program is centered around the FREE **STEM Mobile Labs** app, which brings together some of the best FREE STEM-focused technology tools available for Apple and Android smartphones and tablets. From links to a virtual chemistry lab to access to practical lessons in financial literacy, **STEM Mobile Labs** engages young people via the mobile devices they can't put down.

Feel free to use this QR code to download the **STEM Mobile Labs** app to your own mobile device. You will be amazed by the wonders you and your teen can explore together! **While the apps are all FREE, standard data rates may apply during download and usage, so you and your child should consider the use of Wi-Fi as an alternate connectivity method, if necessary.**

Sincerely,

Dominic Kinsley
Editor in Chief
Young Minds Inspired

Want to see amazing Science, Technology, Engineering, and Math apps? Explore the **STEM Mobile Labs** app to find innovative ways your teen can use a mobile device for classwork, homework, and test prep. Available for Apple and Android smartphones and tablets.
