

Dear Parents and Guardians,

You want the world for your child—but what if you could give him or her a once-in-a-lifetime learning experience that is out of this world? Now you can. Your child can enjoy a unique, exhilarating, hands-on adventure with the new Astronaut Training Experience® (ATX) and Mars Base 1 (MB1) programs at Kennedy Space Center in Florida.

This exciting educational opportunity makes what students have learned in their classroom science and STEM lessons come alive as they practice the skills astronauts need to travel and work in space, or spend a day managing operations at a base on Mars while providing real data for NASA research. It's an investment in your child's future and an adventure that could very well ignite a lifelong passion for science, setting your child on course to a real career option.

ATX and MB1 are only two attractions in the galaxy of fun and learning your family can explore at Kennedy Space Center. Get an up-close look at the spacecraft that took us to new frontiers and learn more about the story of our country's history of space exploration.

It's an experience that can be found nowhere else in the world, and one that your family will treasure for the rest of their lives.
